

Nano Technology Protective Coating

Nanoman Metal is a clear, nanotechnology enabled coating engineered specifically for all types of metal surfaces. The coating forms an invisible, long lasting bond with the surface to repel water and prevent stains and the build-up of dirt and other contaminants.

Nanoman Metal is certified food safe making it ideal for Stainless Steel BBQ's, basins, benchtops and fridges as well as other household appliances such as ovens, range hoods, dish washers and the like. Used outdoors, it provides protection against acid rain, tea staining, salt deposits, rust and oxidation and can be used to protect a huge range of metal surfaces including stainless steel, chrome, copper, silver, zinc, brass, iron, aluminium and unvarnished alloys.

Nanoman Metal is designed to reduce cleaning times (by up to 90%) and the use of most household and commercial chemical cleaners. A quick wipe down with a damp cloth is all that is needed to remove most marks and fingerprints. Detergents can still be used from time to time and will not affect or damage the nano coating in any way. This is not only good for our environment but reduces water usage as well.

Nanoman Metal is abrasion resistant and will help protect these surfaces from etching and the effects of weathering when used outdoors. The coating is completely UV Stable and cannot peel, flake, crack or discolour at any time. Stainless steel and other metals will stay shiny and protected even in harsh marine environments or in areas with high pollution or dust levels. Usage rate is approximately 10mls per m2.

- * Protection for all metal and stainless-steel surfaces.
- * Repels water and prevents the build-up of dirt and other contaminants.
- * Easy to apply.
- * Long lasting (up to 5 yrs. depending on use).
- * Protects against etching and surface degradation.
- * Reduces cleaning time by up to 90%.
- * Reduces the need to use chemical cleaners.
- * Invisible, UV stable and chemical resistant.
- * Certified food safe.
